Nautilus Launches “JET-LAG-SPRAY” For Effective Travel Fatigue Protection

That Helps Boost Natural Immunity, Protecting Against Harmful Radioactive Iodine, Colds And The Flu Bug

Beverly Hills, California (Issuewire.com (https://www.issuewire.com/)) - Nautilus Biotech Corporation, announced today the official launch of a new medicated anti-fatigue travel remedy called; JET-LAG-SPRAY. In the future Airline flight crews and frequent flyers might improve their mental and physical sharpness using a potassium iodide-based electrolyte anti-fatigue oral spray. The results of a prospective clinical study suggests that JET-LAG-SPRAY can be used as a safe and effective alternative to conventional Airport Kiosk homeopathic formulations such as “No-Jet-Lag” or “JetLagFX” used to remain focused and alert during long-haul international flights. JET-LAG-SPRAY helps boost natural immunity, protecting against harmful radioactive iodine, colds and the flu bug.

In addition to caffeine JET-LAG-SPRAY contains a special blend of Potassium Iodide, Menthol, Silica, Selenium, Calcium, Silver, DMAE and Rhodophyceae (Red Seaweed), that has been designed to help maintain one's immune system naturally. Airline travel across multiple time zones produces jet lag, which includes difficulty initiating or maintaining nighttime sleep, daytime sleepiness, decreased alertness, loss of concentration, impaired performance, fatigue, irritability, disorientation, depressed mood and gastrointestinal disturbance. Jet lag poses a threat to public safety as it affects civilian and military pilots.

"If you take veteran Flight Attendants dealing with day to day unruly drunk passengers soon to be on the Federal 'No-Fly' List, but after the adrenaline surge wears off, that are stressed by lack of sleep, the flu bug along with radiation readings in the Passenger Cabin that are moderate to high levels which average 2-3 uSv/h, 20 to 30 times the radiation you're exposed to on the airport tarmac, the same dose as from 1-2 chest x-rays if you fly for 11 hours. You may find they are not eating or hydrating adequately, but a scientifically formulated electrolyte anti-fatigue oral spray may temporarily provide stimulation

to restore their performance to what a normal rested, well-fed and hydrated Flight Attendant would be," says Richard H, Davis, President and CEO of Nautilus Biotech Corporation, "In addition, this pharmaceutical safeguard may give Flight Attendants some reassurance and peace of mind from developing some future radiation sickness due to radioactive iodine-131, an isotope that decays to its non-radioactive form very quickly, potassium iodide is the prophylactic protocol used to protect the thyroid gland from the absorption of harmful radioactive iodine," said Davis.

About Nautilus Biotech Corporation

Nautilus Biotech Corporation is a special purpose company formed on November 21 2007 under the laws of the State of Delaware, Incorporation Number: 4461554 under the Department of State: Division of Corporations. Nautilus Biotech Corporation is a leading biotechnology company focused on the discovery, development and commercialization of novel biomedical technologies to address cognitive issues in neurodegenerative diseases and other age-related aspects of aging and memory loss.
